**Subject:** Re: 10/13/2020 BOA Hearing

Good afternoon Austin,

In reading today's email from you I thought it would be in all's best interest to send pictures of the equipment for use. The RotoVap is what I call a glorified beaker set. This is the piece that separates the liquids from the plant itself. Ethanol and AntiFreeze are used in this machine. The vacuum ovens are used to place the liquid materials from the RotoVap into, to then heat and vac away the remaining residues from the RotoVap chemicals (Ethanol). The remaining cabinet within the processing area is to house glassware, gloves, miscellaneous items. The pic is close enough to zoom in and see that no chemicals are present within this space. The attachment labeled fire proof cabinets are the cabinets that will be going into the Processing room to house the chemicals listed and sent within the Special Exemptions documents sent thru the portal and emailed to City Officials.

I have also received an additional request from Dana Box. Dana has asked that I show this document to you when I get to the meeting tomorrow. I will have it with me. Looking forward to it. Thank you.
