# EXECUTIVE SUMMARY

---

## WHAT IS STRATEGIC PLANNING?

---

The concept of Strategic Planning was adapted to an urban planning context normalize the prioritization of public investment through various city-led programs and initiatives.

The Tulsa Planning Office believes that data and process can play a greater role in guiding decisions and making Tulsa a more equitable, sustainable, and pleasing place to live. To more effectively understand and counter the infrastructural, social, political, and economic challenges faced by Tulsans, the Planning Office has built an analytical model and **decision-making framework** affirmative of **five principles** drawn from documents like the Mayor's **AIM Plan**, **Resilient Tulsa**, **planitulsa**, and **CitiVoice** index results. They focus on...

1. **Fostering community buy-in** and leadership
2. **Facilitating revitalization** and quality infill development
3. **Leveraging growth** to build **inclusive** neighborhoods;
4. **Improving accessibility** to connect people with places; and
5. **Funding and implementing** plan recommendations

Each Guiding Principle provided context for its component Key Indicators, each of which were synthesized to build an initial view into the unique challenges facing neighborhoods.

When analyzed, the key indicators yield a **Guiding Principle Score**, a 0 to 1 number illustrating the degree to which an initiative in an area would affirm the above guiding principles. The closer to 1, the more aligned that investment would be with the guiding principles.

## PROBLEM STATEMENT

---

Using input from the Streets & Stormwater Department, data and indicators framed by the above guiding principles, and Resilience and Equity tools provided by the Mayor's Office, The Planning Office has classified the problem as...

*A backlog of citizen requests for streetlights is **untested** and in need of a **prioritization** method. Future streetlight efforts require **intentionality, strategy, and optimization**.*

## RECOMMENDATIONS

---

**Vision:** All residents of and visitors to Tulsa deserve safe, lively, and durable pedestrian environments.

**Mission:** The Street's & Stormwater Department's accommodation of streetlight requests will utilize data, resilience & equity lenses, and objective prioritization frameworks to address inadequate street lighting conditions.

**Objective:** Address Backlogged Requests

**Strategy:** Utilize rolling average scoring to equitably distribute how streetlight requests are addressed.

**Action:** Assess the validity of each request as prioritized. Decide whether a streetlight installation is warranted immediately after vetting the request against existing conditions.

**Note:** The **Streetlight Requests Map** displays citizens' requests (circles) over a visualization of every parcel's **Streetlight Urgency Score**.

# STRATEGIC PLANNING ANALYSIS

Key indicators were combined to yield a **Streetlight Urgency score** for every parcel in Tulsa. Streetlight urgency scores were assigned to individual requests. The **Streetlight Urgency Score** was averaged with the **Guiding Principles Score** to create a **Streetlight Alignment Score**. The request with the highest Streetlight Alignment Score was prioritized first, etc.

The Streets & Stormwater Department indicated that key indicators illustrating a potential need for streetlights include high rates of **1) collisions** involving pedestrians and cyclists and a concentration of **crimes**. Streetlights are also most useful in areas featuring a concentration of **2) active transportation infrastructure** (sidewalks, bike lanes, and BRT stops) and **active transportation users**. High-priority areas also have access to **3) nearby necessities** (schools, healthcare, employment centers, grocery stores, and parks) while experiencing **4) unfavorable economic conditions** (low per capita incomes, life expectancies, educational attainment rates, employment rates, and labor force participation rates).

## KEY INDICATOR 1: STREETSIDE HAZARDS

Streetlights can remedy physical and social hazards in the right of way. A concentration of **collisions involving pedestrians and crime** could reasonably indicate a need for streetlight inventory and reinvestment.

## 2: RELIANCE ON ALTERNATIVE MODES OF TRANSPORTATION

To control for environmental factors—and to see where the absence of streetlights might cause unsafe environments—the Strategic Planning model prioritizes places where densities of infrastructure (sidewalks, bike lanes, and BRT stations) and **active transportation** users exist.

## 3: NEARBY NEEDS

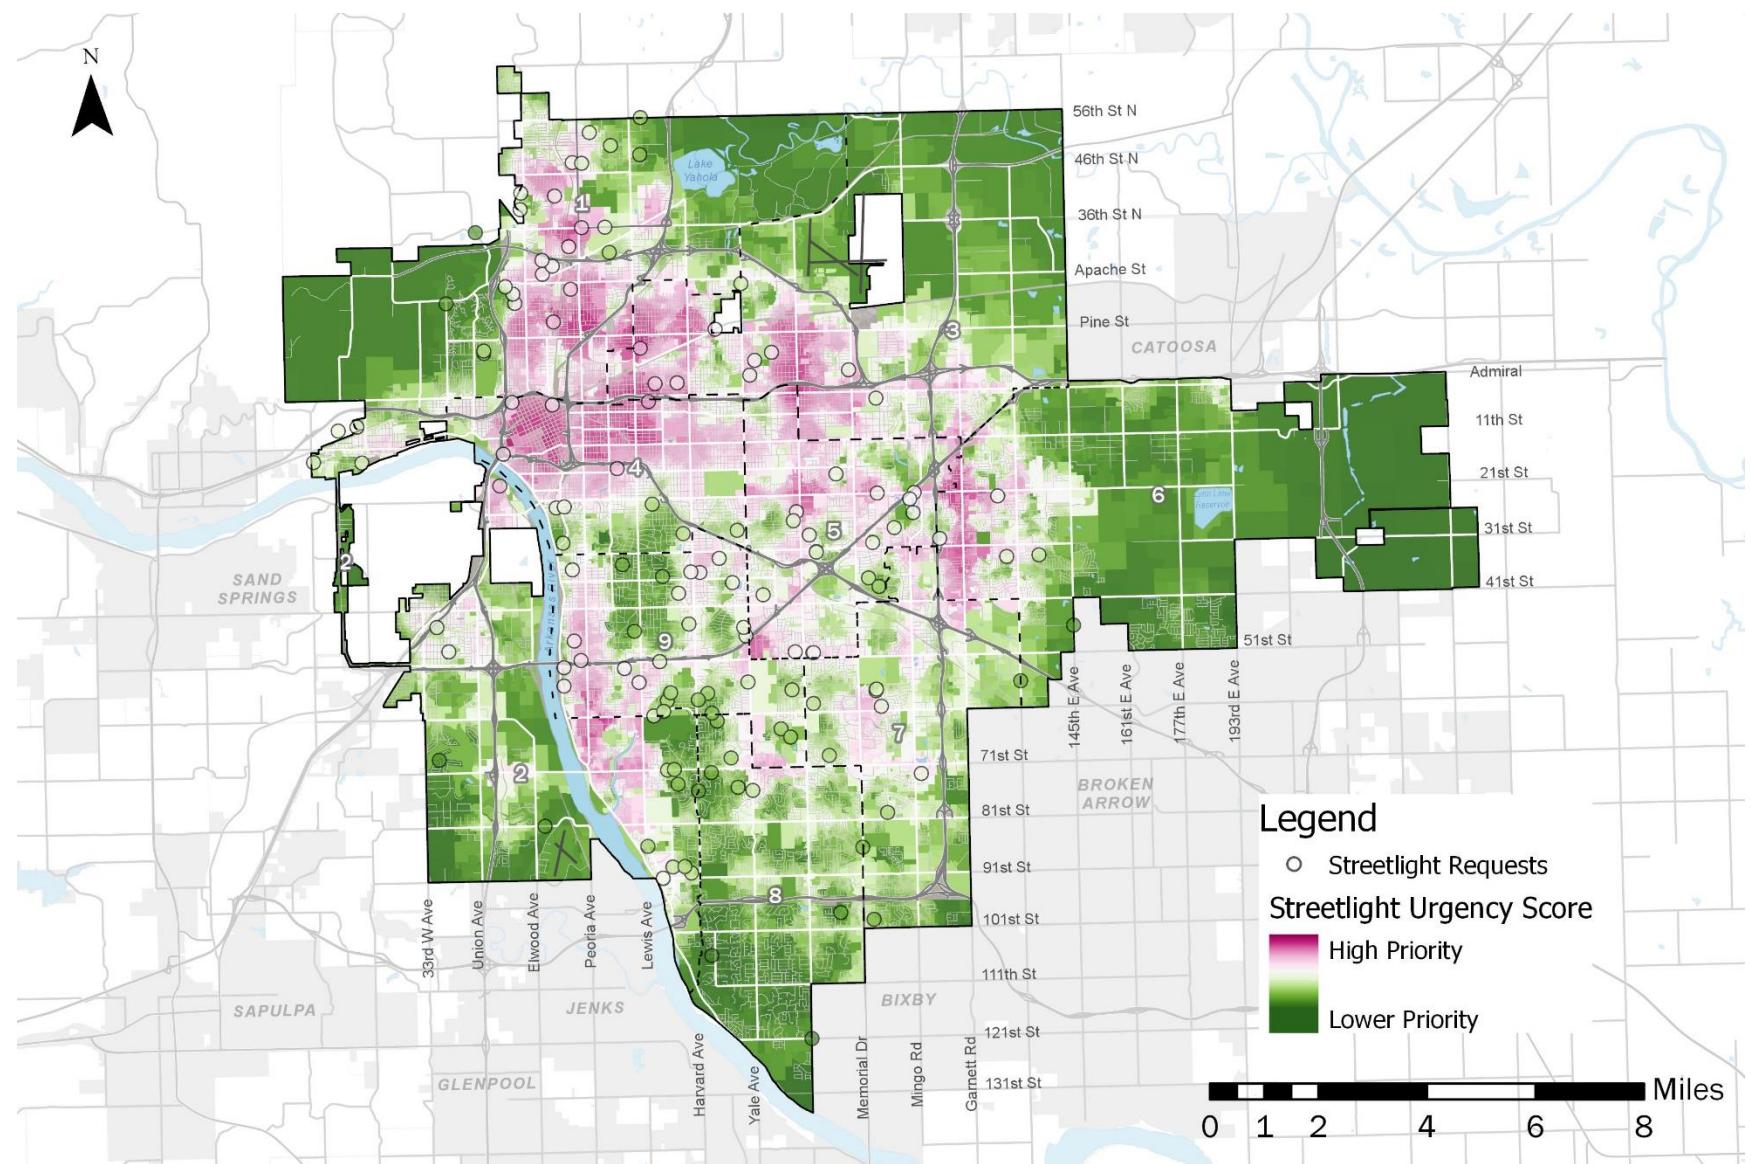

The Strategic Urgency Score supposes that streetlights should be installed in places near **common needs-based destinations**—schools, grocery stores, healthcare facilities, employment centers, and parks.

## 4: ECONOMIC CONDITIONS

Bonus priority points were awarded to areas with low **Prosperity Scores**. The Prosperity score comprises census bureau and health department data re: Per Capita Incomes, Life Expectancies, Educational Attainment, Employment, and Labor Force Participation Rates.

Streetlight Urgency Score		
	Key Indicator	Data Points
50%	Hazards	Concentration of Crime
		Concentration of Bike/Ped Collisions
20%	Reliance on Alternative Modes of Transportation	Concentration of Sidewalks
		Concentration of Bike Facilities
		Proximity to BRT Stations
		Concentration of Active Transportation Users
20%	Nearby Needs	Concentration of Needs-Based Uses including: Grocery Stores, Schools, Healthcare, Parks, & Employment
		Low Per Capita Incomes
10%	Economic Conditions	Low Life Expectancies
		Low Employment Rates
		Low Labor Force Participation
		Low Educational Attainment
